EAM 115 AR

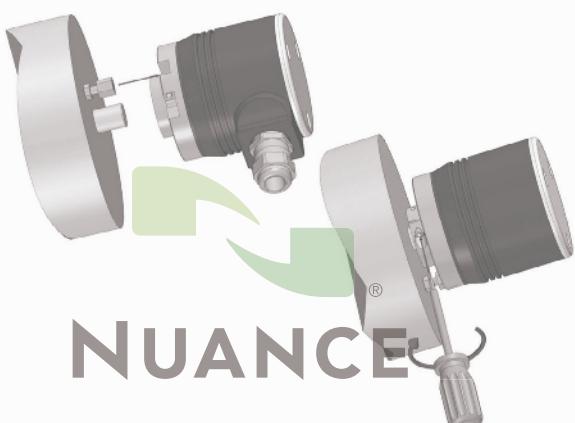

Dimensions with axial output cover

HOW TO MOUNT THE EAM63GR

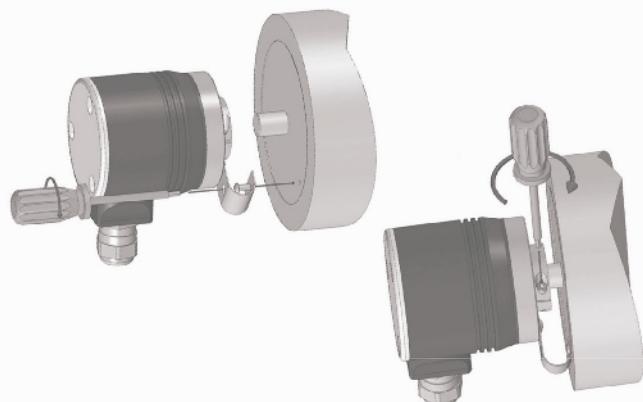

- 1) Fix the antirotation pin on the motor flange.
- 2) Couple the encoder shaft with the motor shaft, ensuring that the pin is inserted on the frontal part of the encoder (maintaining a minimum distance of 0,5 mm).
- 3) Fix the encoder shaft by the metal ring.

NUANCE

HOW TO MOUNT THE EAM63FR

- 1) Couple the encoder shaft with the motor shaft.
- 2) Fix the spring at the motor flanges without screwing it.
- 3) Fix the encoder shaft by the metal gear.
- 4) Block the spring.

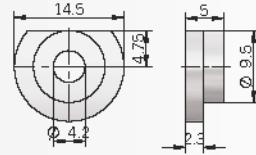

Electrical specifications

Multiturn resolution	from 2 to 16384 (powers of 2)
Singleturn resolution	from 2 to 8192 (powers of 2)
Power supply	5 V DC \pm 10% (only with SSI interface) 8 ... 28 V DC \pm 5%
Current consumption without load	100 mA
Max load current	20 mA per channel (Parallel interface)
Electronic interface	Parallel interface: PUSH-PULL (positive logic) SSI RS422
Auxiliary input (U/D - LATCH)	active high (+Vdc) connect to 0V if not used

Eltra®
sensing technology

PRESENTATION

The Eltra multiturn Profibus encoder series (Identification Number 0x0599) is complying to the Profibus DP standard as described on the European Standard EN 50170 Volume 2. Particularly, Eltra Profibus encoders are according to "PROFIBUS-Profile for Encoders, Order No. 3.062". The Profibus DP interface maintains the same maximum resolution and characteristics (8192 ppr and 4096 revolutions) of the stand-alone version and adds the plus of the Profibus DP network.

By the Profibus DP network is possible:

- During the periodic data exchange, getting the indication of the angular position from the encoder.
- During the set up, setting the resolution as number positions within the single turn and as number of turns.
- During the set up, changing the default increase direction count.
- To perform the PRESET operation (set the encoder to read a specific position).
- Reading the diagnostic operating mode.
- Getting info about the code supplied by the device.

Directly from the device it is possible:

- To display the ON/OFF status.
- To display the device activity on the bus.
- Setting the device address.
- If requested, inserting in the bus the termination resistance.
- Inverting the counting direction.

**EAM
PROFIBUS**
MULTITURN ABSOLUTE
ENCODER

HARDWARE INSTALLATION DEVICE

Installing the Eltra Profibus encoder in a network requires the execution of the standard steps necessary for configuring any Profibus DP slave. The sequence of steps is as follow:

1. Commissioning the slave on the master (see corresponding paragraph).
2. Wiring the encoder into the Profibus network using or not terminations depending on the physical position the devices has in the bus.
3. Directly set the address (which must be unique in the network and the same as the one chosen in point 1) for the slave.
4. Preparing the master side application/s and setting up the Profibus network.

On the back cover of the encoder (see picture) there is a led inspection window.

The device operating status can be controlled by the two led through the window. The green one shows the power presence and must be permanently switched on. The red led switches off only during the periodic data exchange between the Profibus master and the encoder.

In the section plan along side the 2 dip-switches of termination line and the 8 dip switches of device address are shown. In the particular shown configuration, the 2 termination line contacts are set to OFF so the termination of the bus is not expected to occur on the encoder.

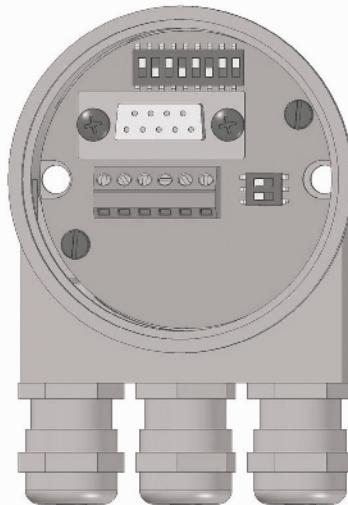

Only seven out of the eight available dip-switches are used to address the slave because the maximum number of devices that can be connected to a Profibus network is 128. For addressing the device, only the first seven dip switches out of the eight available are used.

The contact number 8 is the LSB while the number 2 is the MSB.

The eight contact (1) is used to invert the code.

CONNECTION TO THE NETWORK

For connecting Profibus encoders to the network, cables within the device can be accessed by the three cable glands (in any event only two of them can be used).

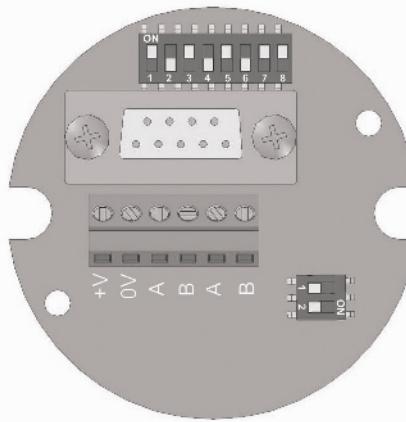

TERMINAL BLOCK ACCESS

To access the terminal block, unscrew the two screws on the rear plug and release the rear case from the main one.

Then, connect wires according to the cable connections as reported on the table on the right.

Please NOTE:

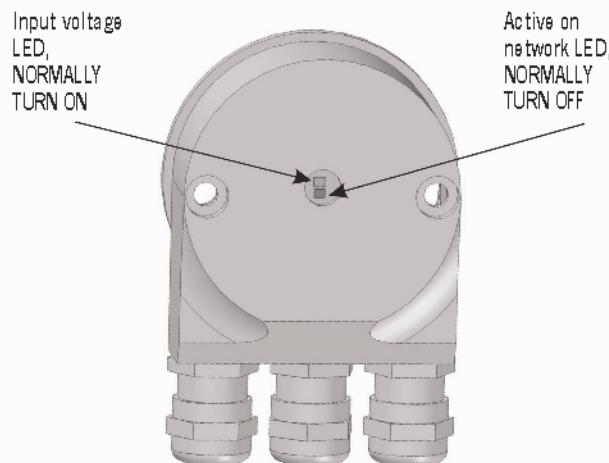

to set and configure the slave into the Profibus DP master ('commissioning' step) it is necessary to use the "Exx_0599.gsd" file delivered with the encoder. This file can eventually be downloaded from web site: www.eltra.it.

NETWORK SPECIFICATIONS

Usually, an A type cable is used to wire a DP/FMS network. This cable has to have the following characteristics:

Parameter	Cable type A
Characteristics in Ω	135 ... 165 at a frequency of (3 ... 20 MHz)
Operating capacity (pF/m)	< 30
Loop resistance (Ω/km)	< = 110
Core diameter (mm)	> 0.84*
Core cross-section (mm^2)	> 0.34*

This cable allows an optimum network utilization. In fact, it is possible to reach the maximum communication speed allowed (12MBaud). However, there are some limitations due to the maximum physical dimensions of a bus segment as follows:

Baud rate (kbit/s)	Range/Segment
9.6	1200 m
19.2	1200 m
93.75	1200 m
187.5	1000 m
500	400 m
1500	200 m
12000	100 m

Finally, main physical and topographical specifications of a Profibus network are as follows:

Specifications

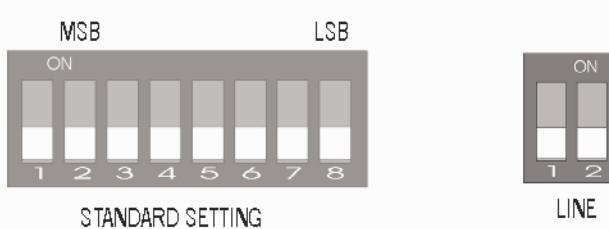

Maximum number of stations participating in the exchange of user data	DP: 126 (address from 0 ... 125) FMS: 127 (address from 0 ... 126)
Maximum number of stations per segment including repeaters	32
Available data transfer rates in kbit/s	9.6, 19.2, 45.45, 93.75, 187.5, 500, 1500, 3000, 6000, 12000
Max number of segments in series	According to EN 50170, a maximum of 4 repeaters are allowed between any two stations. Dependent on the repeater type and manufacturer, more than 4 repeaters are allowed in some cases. Refer to the manufacturer's technical specification for details.

Output connections for PROFIBUS® DP encoder

0 Volt	4		
signal A (out)		2	
signal B (out)		4	
signal A (in)			2
signal B (in)			4

DIP-SWITCHES SETTING

Below it is reported an example of the standard position of address and termination dip switches as well as settings for closing a Profibus line.

In this example the device address is set equal to 1001101 from bit number 2 to bit number 8 corresponding to HEX 77. Meanwhile, the first bit represents the inversion of the code (activated in this case).

EMA - EMS 22 A

SINGLETURN ABSOLUTE
MAGNETIC ENCODERS

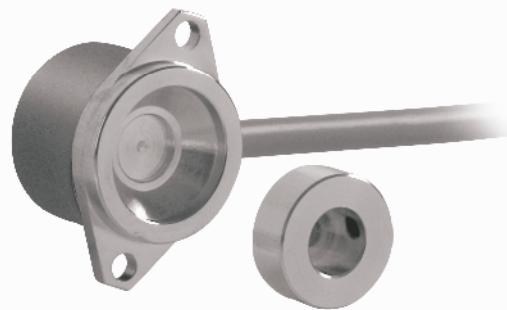

MAIN FEATURES

EM series encoders are suitable for several application fields like electric motors marine industry, iron and steel industry, textile machines, wood-working, paper-working, glass working, marble-working machinery and, more generally, automation and process control fields.

Main characteristics:

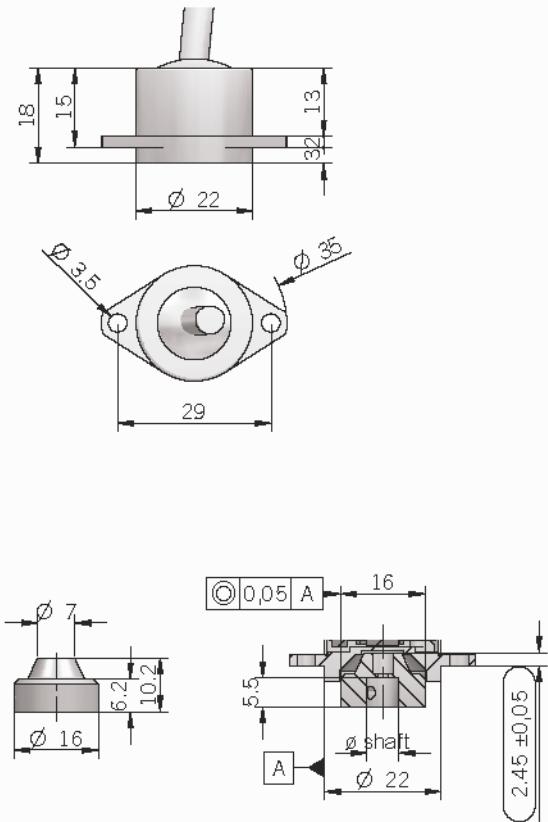

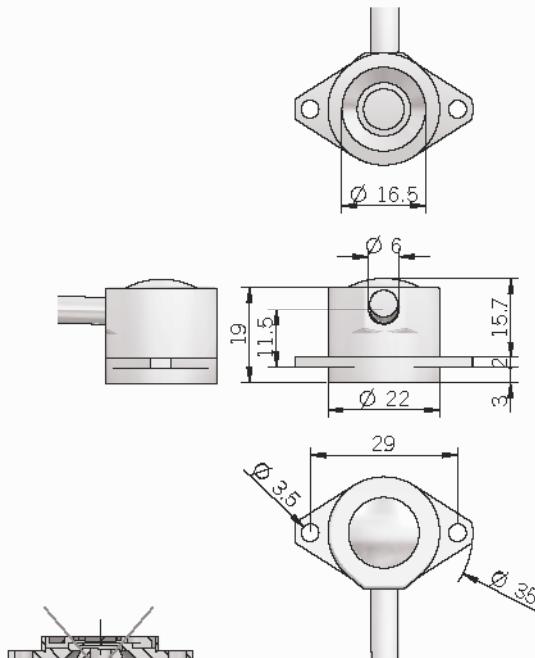

- Compact dimensions
- Absence of physical contact between encoder and motor shaft
- High temperature resistant
- High resolution and precision
- High protection rating
- High operating speed
- Excellent mechanical sturdiness
- Very easy mounting

SINGLETURN ABSOLUTE ENCODER

MAIN FEATURES

The EML 50 is a magnetic rotary encoder. Its sturdiness, compact size and easy mounting system make the EML 50 suitable for heavy duty applications such as marble and glass working machinery, marine and industrial applications.

- Analogue linear voltage or current output
- blind hollow shaft
- IP 67 protection class
- Wide temperature range (-25° ... +85 °C)

Electrical specifications

Resolution	12 bits per revolution
Active angle	90 ... 360 mechanical degrees
Power supply	5 V DC $\pm 5\%$
Current consumption without load	12 ... 28 V DC $\pm 5\%$ reverse polarity protection
Signal pattern	decreasing with clockwise rotation (shaft view)
Auxiliary inputs (U/D - Reset)	active high (+Vdc) connect to 0V if not used / Reset $t_{\text{max}} = 150 \text{ ms}$
Electronic interface	analogue linear voltage output (0 ... 5 V / 0 ... 10 V) analogue linear current output 3 wires sink (0 ... 20 mA / 4 ... 20 mA)
Load	$R_{\text{min}} = 1 \text{ k}\Omega$ (voltage output) $R_{\text{max}} = (V_{\text{DC}} - 2) / 0.02$ (current output)
Linearity error	< 1%
Start-up time	150 ms
Electromagnetic compatibility	IEC 61000-6-2 IEC 61000-6-4

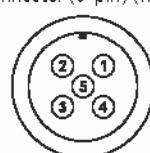

Mechanical specifications

Shaft diameter	6 / 8 / 9.52 (3/8") / 10 / 12 / 14 / 15 mm
Enclosure rating	IP 65 (IEC 60529) IP 67 (optional) (IEC 60529)
Max rotation speed	3000 rpm continuous 5000 rpm peak
Max shaft load	30N (3 Kgf) axial 50N (5 Kgf) radial
Shock	50 G, 11 ms (IEC 60068-2-27)
Vibration	10 G, 10 \div 2000 Hz (IEC 60068-2-6)
Bearings	n° 2 ball bearings
Bearings life	10 ⁶ revolutions
Shaft material	1.4305 / AISI 303 stainless steel
Body material	EN-AW 2011 aluminum
Housing material	EN-AW 2011 aluminum
Operating temperature	-25° ... +85 °C
Storage temperature	-25° ... +85 °C
Weight	200 g

sensing technology

OUTPUT CONFIGURATIONS

INCREMENTAL AND ABSOLUTE ENCODERS

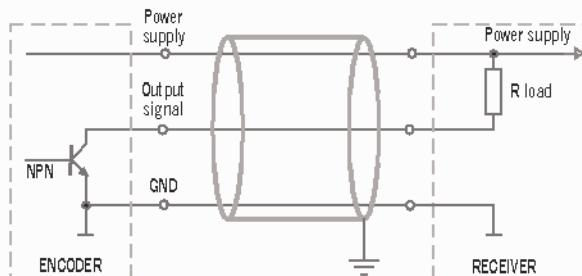

NPN AND NPN OPEN COLLECTOR ELECTRONIC

It is composed by an NPN transistor and a pull-up resistor used to match the output voltage to the power supply when the transistor is off.

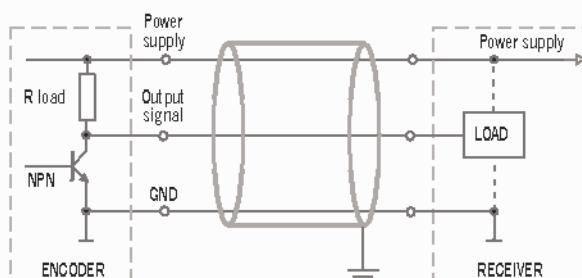

It has low saturation levels at 0 Vdc and close to 0 at the positive. It is proportionally influenced by the cable length, pulses frequency and by the load.

Please consider these specs for a proper use. On the open collector variant there's no pull-up resistor, freeing in such way the transistor collector from the tie of the encoder power supply allowing to obtain signals with different voltage.

NPN OPEN COLLECTOR

NPN

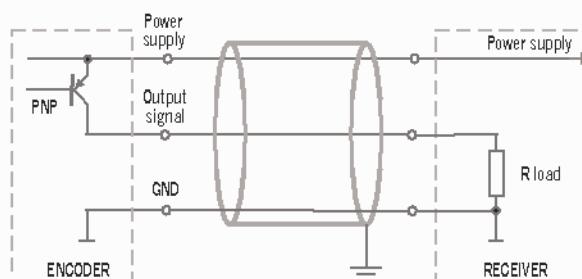

PNP AND PNP OPEN COLLECTOR ELECTRONIC

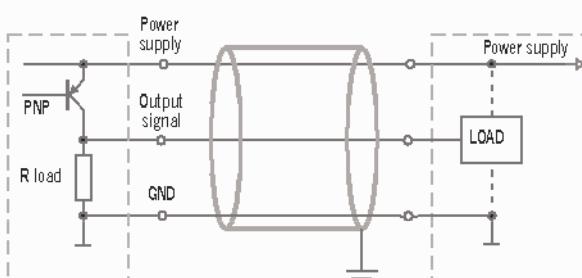

Main characteristics and limitations are the same as for NPN electronics. Main difference is the transistor, which is a PNP type. The resistor, if present, is a pull-down one.

Therefore, it is connected between the output and OV.

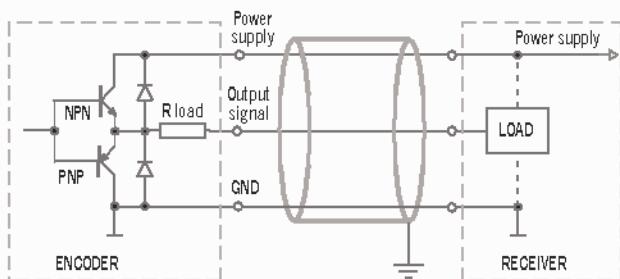

PNP OPEN COLLECTOR

PNP

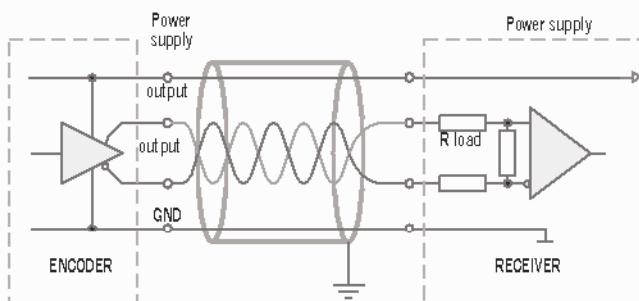

PUSH-PULL

PUSH-PULL ELECTRONIC

In NPN or PNP major limitations are caused by the resistor, which works with a much higher impedance than a transistor. To overcome this issue, push-pull electronic uses a complementary transistor, so the impedance is lower for commutation to positive and to zero. This solution increases frequency performances allowing longer cable connections and an optimal data transmission even at high working speed. Saturation signals are low but sometimes higher than in NPN and PNP electronics. Anyway, PUSH-PULL electronics is in any case indifferently applicable instead of NPN or PNP.

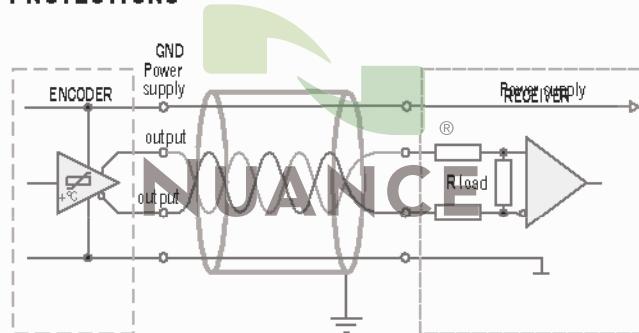

LINE DRIVER

LINE DRIVER ELECTRONIC

LINE DRIVER is used when operating environments are particularly exposed to electrical disturbances or when the encoder is quite far from the receiver system. Data transmission and receiving work on two complementary channels so disturbances are limited (cross talk from other cables). These interferences are known as «common mode disturbances» as their generation is due to a common point which is OV. Instead, in LINE-DRIVER transmitted and received signals are in «differential» way. In other words, it works basing the communication on voltage differences between complementary channels. Therefore it is not effective to common way disturbances. This type of transmission is used in 5 Vdc systems and it is also known as RS422. It is available also with power supplies up to 24 Vdc.

PROTECTIONS

OUTPUT STAGE PROTECTION

A highly integrated ASIC is used to protect outputs from short circuits. This solution is based on an active sensor which controls instantly the temperature reached by the element to be protected. In this way, protection is very effective. Moreover, it ensures a constant protection against repetitive and permanent short circuits, that is why is strongly suggested for heavy usages. It is available for LINE-DRIVER and PUSH-PULL electronics.

ENCODER CABLE LENGTH

Based on the power supply, electronic interface and output frequency maximum cable length are as below tables:

Incremental encoders

Power supply (Vdc)	Electronic interface	Frequency (kHz)	Max cable length (m)
5V	Line driver RS422	50	300
5V	Line driver RS422	100	200
5/28V - 8/24V	Line driver	50	80
5/28V - 8/24V	Line driver	100	40
5/28V - 8/24V	Push-pull	50	60
5/28V - 8/24V	Push-pull	100	30

System setup: ambient temperature (20°C), load current 20 mA , Eitra AWG24 shielded cable.

Absolute encoders

Power supply (Vdc)	Electronic interface	Frequency (kHz)	Max cable length (m)
8/28V	Push pull Parallel	25	100
5V - 8/28V	SSI	100	300
5V - 8/28V	SSI	200	200
5V - 8/28V	SSI	400	50
5V - 8/28V	SSI	1000	10
12/28V	Analogue (current)	-	200

Depending on the application, maximum cable length might be shorter, particular eg: where a high level of electrical noise is present.
 Please carefully select the power supply core diameter. Its size should be big enough that encoder voltage is inside working parameters as specified within the product datasheet.
 Use always shielded cables, for further details or informations please directly contact our offices.

Precautions against electrostatic discharges

Be sure the metallic case of the connector is connected to the ground through a ring fixed to the screw of the connector itself. (Fig. 1)

Fig. 1

Connect the cable shield to the ground and to the connector case. (Fig. 2)

Fig. 2

Proper installation of cables

- Make sure cable shield is connected to the ground and avoid connecting it to the power ground (0 V).
- Keep the encoder cable (signal cable) sufficiently far from power lines.
- Choose the cable according to installation requirements.
- Lay the cable avoiding spirals.

Nuance

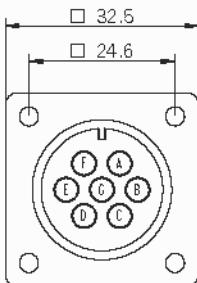

- Custom cables, extensions and connectors are available on demand.
- Testing on 100% of the production.
- Anti-vibration wiring system.
- Contact us for further informations.

PRECAUTIONS AGAINST ELECTROSTATIC DISCHARGES

Be sure the metallic connector is connected to the ground through a ring fixed to the screw of the connector itself. (Fig. 1)

Fig. 1

Ground connect to the shield and the connector case. (Fig. 2)

Fig. 2

For a better protection of the electronics against electrostatic discharges connect the metallic connector case to ground.

CABLE PROPER USE

Ensure a ground connection to the cable shield avoiding to connect it to the power ground.

Keep the encoder cable (signal cable) to a proper distance from the power ones.

Choose the cable's lenght according to installation requirements.

Spread the cable avoiding spirals.

NEWS

Cable exstensions and connectors could be designed on demand.

Testing on 100% of the production.

Antivibration wiring system.

INSTALLATION AND OPERATION PRECAUTIONS

INSTALLATION AND OPERATION PRECAUTIONS

The encoder must be used with respect to its specifications. Encoder is a pulse generator and not a safety device.

Assembling and installing personnel must be qualified and carefully follow instructions of technical manual.

Don't expose the device to stress or impacts in order to ensure the correct working otherwise the warranty expires.

Make sure that the mechanical coupling of the encoder shaft is designed with the appropriate elastic couplings, especially in the case of accentuated axial or radial movements.

Make sure that the environment of use is free of corrosive agents (acids, etc.) or substances that are not compatible with the device.

Check the ground connection of the device if it is not possible to provide additional external connection.

Before putting it in operation, verify the voltage range applicable to the device and protect it from exceeding the stated technical specifications.

Connect power supply and signals cables in order to avoid capacitive or inductive interferences that may cause malfunction of the device.

Cable wiring must be carried out in a **POWER-OFF** condition.

For safety reason, we strongly recommend to avoid any mechanical or electrical modification. In that case, they will void the warranty.

MAIN PRODUCT WARRANTY TERMS

Replacements or repairs whether under the warranty or at the customer's expense must be performed in the service department of Eltra Srl or by explicitly authorized personnel. Before sending material for repairing, you must obtain an RMA number from our sales office. During the repair process in our service department, Eltra srl will be authorized to remove all parts that the customer added to the product. Any malfunction due to a failure to observe these usage and installation precautions will lead to the warranty voiding. Repairs will not extend the product warranty. We also exclude compensation for any type of damage or injury due to the use, or suspension of use, of the transducer. Note: for additional information, refer to the sale terms on our website, www.eltra.it, or call our office.
